Health Safety and Welfare Reporting

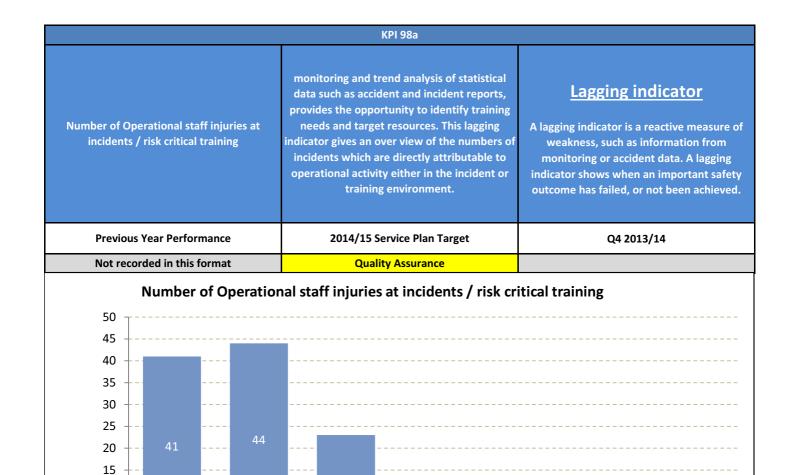

10 5 0

2011/12

2012/13

Introduction Fire The Authority has in place appropriate arrangements for monitoring and measuring health, safety and welfare performance against predetermined plans and standards, including learning from incidents and using the information to improve operational performance.

Measurement is essential to maintain and improve health, safety and welfare performance, both leading and lagging indicators are used.

2015/16

2016/17

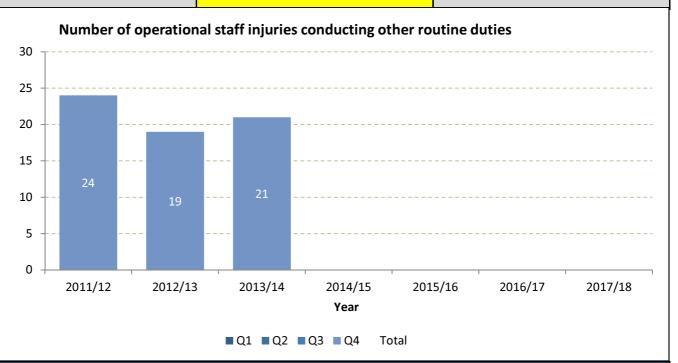

2017/18

2013/14

As for the previous year numbers of operational staff injuries in 2013/14 were below the LPI set however this year also saw an increase in reported injuries from 41 to 44. The revised reporting methodology introduced this year has introduced the separation between injuries / accidents occurring at incidents and training and those occurring as a result of routine workplace activity. It is envisaged that this will enable more detailed root cause analysis of the causal factors for adverse events.

The reporting period has seen the implementation of the IRMP action to reduce the number of front line Fire Appliances to 28 this has resulted in a reduction of staff but a potential increase in the number of operational incidents attended by individual Firefighters.

KPI 98b		
Number of operational staff injuries conducting other routine duties	monitoring and trend analysis of statistical data such as accident and incident reports, provides the opportunity to identify training needs and target resources. This lagging indicator gives an over view of the numbers of incident which are occur as a result of routine activity in the workplace.	monitoring or accident data. A lagging

As for the previous year numbers of operational staff injuries in 2013/14 were below the LPI set however this year also saw an increase in reported injuries from 41 to 44. The revised reporting methodology introduced this year has introduced the separation between injuries / accidents occurring at incidents and training and those occurring as a result of routine workplace activity. It is envisaged that this will enable more detailed root cause analysis of the causal factors for adverse events.

The reporting period has seen the implementation of the IRMP action to reduce the number of front line Fire Appliances to 28 however, the alteration in the work routine has seen an increase in both role based and physical training activity and the amount of time spent carrying out routine activities such as community safety and preparedness tasks. Keeping people at work and helping them get back to work as soon as possible can help maintain an employee's health and wellbeing and improve organisational effectiveness.

KPI 112		
The number of working days/shifts lost to sickness absence per head, all personnel.	Organisationally the financial Impact and the benefit of keeping absenteeism low is a primary consideration however this indicator should also be seen as welfare issue - For most employees work generally good for health and prolonged sickness absence can produce its own set of problems: isolation, de-skilling, loss of confidence, mental health issues and social exclusion. means a lot more than just their wage. Studies show that work is Keeping people at work and helping them get back to work as soon as possible can help maintain an employee's health and wellbeing and improve organisational effectiveness.	Lagging indicator A lagging indicator is a reactive measure of weakness, such as information from monitoring or accident data. A lagging indicator shows when an important safety outcome has failed, or not been achieved.
Previous Year Performance	2014/15 Service Plan Target	Q4 2013/14

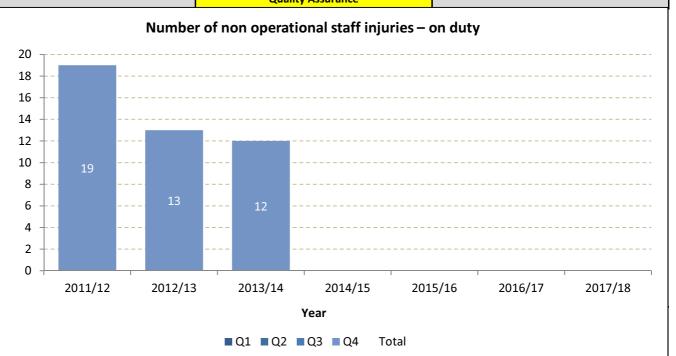

The number of working days/shifts lost to sickness absence per head, all personnel.

Commentary

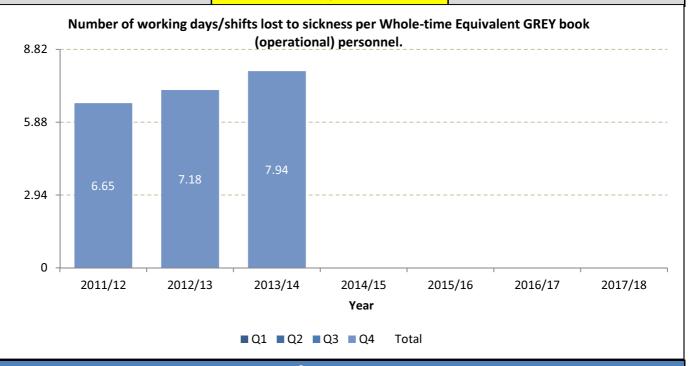

This indicator is now included as part of the amalgamation of the delivery of Health & Safety with staff welfare and is seen as an important reactive indicator in this area. An overall rise in absence of 0.56% has been recorded on the previous year however it should be noted that this figure is a percentage of the workforce which has reduced in numbers on the previous year.

LPI 106		
Number of non operational staff injuries – on duty	monitoring and trend analysis of statistical data such as accident and incident reports, provides the opportunity to identify training needs and target resources. This lagging indicator gives an over view of the numbers of incident which are occur as a result of activity in the workplace.	Lagging indicator A lagging indicator is a reactive measure of weakness, such as information from monitoring or accident data. A lagging indicator shows when an important safety outcome has failed, or not been achieved.

	Quality Assurance	

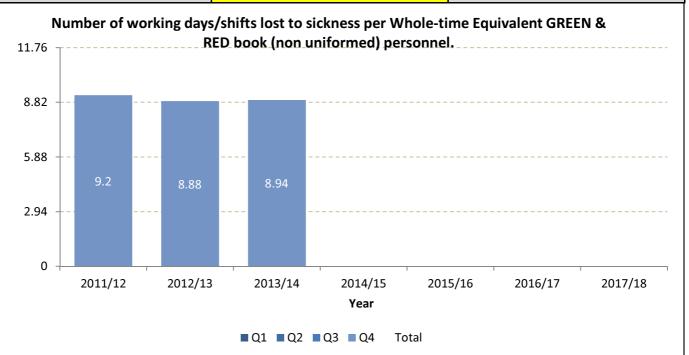

A continued reduction in injuries to non-uniformed staff was recorded during the reporting period. Two injuries were as a result of slips trips and falls, compared to five the previous year. The most prevalent injury type was struck by moving, falling or flying object with four reports – two at workshops one at the TDA and one a member of the prevention team. Of the 19 injuries reported in 2011/12, 61% were manual Handling injuries this was highlighted as being an area of concern and a strategy for reduction was implemented. This reporting period has seen no manual handling injuries reported.

LPI 111A

LPI 120		
RTC's involving fire service vehicles	Damage is acknowledged to be an indicator of the likelihood of accident and injury occurrence. Damage involving Fire Service vehicles is the most widely reported form of damage within the Service. This indicator forms one of the core elements of the Authority's Road Risk Reduction activity.	Lagging indicator A lagging indicator is a reactive measure of weakness, such as information from monitoring or accident data. A lagging indicator shows when an important safety outcome has failed, or not been achieved.
Previous Year Performance	2014/15 Service Plan Target	Q4 2013/14
	Quality Assurance	

This Indicator has seen a small reduction in the number of Vehicle damage incidents on the previous year however, the figure is still considered to be unacceptable and further reduction strategies are already planned for the coming year.

LPI 121		
Site Specific Risk Information (SSRI) - Firefighter Safety - number of successfully completed Survey and Primary forms following SSRI inspections	Accurate, easy to interpret and accessible operational risk information is one of the key components of a strategic Risk Assessment The Authority has a duty to obtain information for extinguishing fires and protecting life and property in the event of a fire occurring and for dealing with road accidents and other emergencies. The provision of risk-critical information on the fire ground is an essential part of the planning process for ensuring safe operations	Leading indicator A leading indicator requires a routine systematic check that specific actions or activities are undertaken as intended, the expected outcome being that safety performance will be enhanced as a result.
